

The High Potential side
is The Origination of
the Oscillations + Back
Feed of the CAPS. (Partial)

? "BEMF" + "Charge" of
Center Coil

$\geq 500\text{Hz}$?
 $\leq 300\text{kHz}$?

PS⁺ or U_e is on the Opposing Rodin Coil.
Or the Low Potential Side. The Oscillations
over the Center Coil + "BEMF" Feed U_e +
% of, to the Caps. Or in the video's
Resistive (1Ω) Load & the High Potential to the
Low Potential work 60%-80% Perpetual?
Oscillation

Over Unity?
