

12VAC • 450mA

POWER TRANSFORMER

NOTE: The 2 black wires on one side are for 120V input. The 2 yellow and 1 black wires on the other side are for output:

- one yellow wire + one black wire = 6V output
- one yellow wire + one yellow wire = 12V output

Important: Do not join together all three output wires, as this will cause the transformer to short-circuit.
