

CONTENTS

Preface	vii
1. Introduction	1
1.1 Magnetotransduction	1
1.2 Discussion Boundaries	2
1.3 Model	3
1.4 Audience	5
1.5 Theme	6
Part I: Environments Experienced by Moving Electric Charges	7
2. Basic Laws and Definitions	9
2.1 The Three Types of Field	9
2.2 Definition of a Magnetic Field	10
2.3 Electrically Charged Particles	10
2.4 Moving Electrically Charged Particles	11
2.5 Flux Lines	12
2.6 Magnetic Poles	13
2.7 Forces on Moving Electrically Charged Particles	15
2.8 Paths Followed by Moving Charged Particles	16
2.9 Toroidal Magnetic Fields	18
2.10 Magnetic Field Direction	19
2.11 Lenz's Law	20
2.12 Magnetic Moment	21
2.13 Magnetons	22
2.14 Flux Driving Force	23
2.15 Flux Resisting Force	24
2.16 Permeability	24
2.17 Types of Moving Charged Particles	25
2.18 Magnetic Mirror	27

x CONTENTS

3. Chemical Effects	28
3.1 Force Patterns	28
3.2 Minimum Energy	29
3.3 Atomic Particles in Path Traverse	30
3.4 Lenz Opposition	31
3.5 Spinning Particles	32
3.6 Magnetic Field Effect on Orbit Energy	34
3.7 Spinning Particle Pairs	36
3.8 Unpaired Spinning Particles	38
3.9 Directional Coherence	39
3.10 Magnetization	41
3.11 Imposed Field Alignments	41
3.12 Field Intensity	43
3.13 Microenvironment	44
3.14 Self-Alignment	45
3.15 Individual Opposition	46
3.16 Individual Skewed Opposition	47
3.17 Group Opposition	48
3.18 Domain Walls	49
3.19 Crystal Restrictions	50
3.20 Multiple Domains	51
3.21 Phase Transitions	52
3.22 Double Lattice	53
3.23 Magnetic Anisotropism	54
3.24 Susceptance Variations	55
3.25 Flux Refraction	55
3.26 Spin Waves	55
3.27 Magneto-Electric Effect	57
4. Magnetic Hysteresis	60
4.1 Domain Matrix	60
4.2 Weak Magnetic Fields	61
4.3 Medium Magnetic Fields	62
4.4 Strong Magnetic Fields	63
4.5 Hysteresis Loop	63
4.6 Barkhausen Effect	65
4.7 Energy Loss	66
4.8 Rotational Hysteresis	67
4.9 Ancillary Effects	67

5. Thermal Effects	69
5.1 Chemical Potential	70
5.2 Nerst Effect	71
5.3 Magnetron Alignments	72
5.4 Thermoferromagnetic Effect	72
5.5 Cabrera-Torroja Effect	74
5.6 Thermoferrimagnetic Effect	75
5.7 Ferromagnetic-Thermoelectric Effect	76
5.8 Decalescence	76
5.9 Magnetic Semiconductor Effect	77
6. Mechanical Effects	79
6.1 Ampere's Forces	79
6.2 Pinch Effect	80
6.3 Magnetic Rigidity	80
6.4 Dimensional Changes	81
6.5 Ferromagnetic Stiffening	82
6.6 Mechanical Forcing Fields	82
6.7 Barnett Effect	82
6.8 Maxwell Effect	83
6.9 Paramagnetic Tension	84
6.10 Havens Balance	86
6.11 Paramagnetic Levitation	86
6.12 Magno-Therm Effect	87
6.13 Ferromagnetic Fluid	88
6.14 Relay	89
6.15 Fluid Actuator	90
6.16 Ferrofluid	91
6.17 Magnetic Suspension	93
7. Magnetic Measurements	94
7.1 Field Direction	96
7.2 Oscillating Magnet	96
7.3 Permanent Magnet "Gauss Meter"	97
7.4 Gradiometer	98
7.5 Vibrating Sample Magnetometer	99
7.6 Bozorth Configuration	100
7.7 Gouy Method	101

7.8 Permeameter	102
7.9 Optic Fiber	103
8. Magnetic Resonance	104
8.1 Coherent Precession	104
8.2 Energy/Frequency Equivalency	105
8.3 Larmor Spectrum	106
8.4 Magnetic Pumping	109
8.5 Magnitude of Larmor Signal	110
8.6 Chemical Shifting	111
8.7 Spin-Spin Splitting	113
8.8 Second Order Spin-Spin Splitting	115
8.9 Nuclear Magnetic Resonance Flow Meter	115
8.10 Electron Paramagnetic Resonance	117
8.11 Ferromagnetic Resonance	118
8.12 Winslow/Auld/Elston Configuration	118
8.13 Spin-Wave Resonance	120
8.14 Radiant-Energy/Spin-Wave Resonance	120
8.15 Antiferromagnetic Resonance	121
8.16 Nuclear Quadrupole Resonance	122
8.17 Magnetization Detection Effect	122
8.18 Sonic-Wave/Spin-Wave Resonance	123
9. Radiant Energy	124
9.1 Possible Variables	125
9.2 Luminescence	126
9.3 Stimulation	128
9.4 Surface Emission	130
9.5 Frequency Shifting	131
9.6 Polarization	132
9.7 Magnetic Quenching	134
9.8 Absorption	134
9.9 Photomagnetic Effect	135
9.10 Refraction	136
9.11 Magnetorefraction	138
9.12 Reflection	138
9.13 Kerr Magneto-optic Effect	139
9.14 Interference	140
9.15 Diffraction	141
9.16 Magnetodiffraction	143

9.17 Scatter	143
9.18 Nematic Crystals	145
9.19 Polar Angle Rotation	145
9.20 Faraday Effect	147
9.21 Faraday Isolation	149
9.22 Absorption by Magneton Resonance	149
9.23 Circulator	151
9.24 Optical Pumping	152
9.25 Magnetic Phosphene Effect	154
9.26 Gantmahler Effect	154
9.27 Tuned Conducting Wire	156
9.28 Tunable Microwave Band-Pass Filter	157
9.29 Tuned Magnetic Semiconductor	158
9.30 Holography	159
 Part II: The Effects of Magnetic Field Changes on Moving Charged Particles	 161
10. Moving Conductor	163
10.1 Wire in a Magnetic Field	163
10.2 Accelerated Conductor	165
10.3 Coil of Wire	165
10.4 Homopolar "DC" Generator	167
10.5 Foucault Currents	168
10.6 Metallic Liquid Flow	168
10.7 Electrolytic Flow	171
10.8 Magnetohydrodynamic Flow	172
10.9 Ion Slip	173
10.10 Sound Wave Stiffening	173
10.11 Concentric Flow Meter	174
10.12 Chapin Transducer	175
10.13 Hydromagnetic Effects	176
 11. Electromagnetic Induction	 177
11.1 Induced Voltage	177
11.2 Consequential Currents	178
11.3 Single Loop	180
11.4 Faraday's Law	181

11.5 Self-Inductance	181
11.6 Inductive Reactance	183
11.7 Time Constant	183
11.8 Impedance	185
11.9 Phase Angle	186
11.10 Electric Energy	189
 12. Reflected Impedance	 190
12.1 Reflected Signal Current	190
12.2 Magnitude of Reflected Energy	193
12.3 Target Orientation	193
12.4 Target Location	195
12.5 Multiple Targets, Multiple Responses	196
12.6 Reflected Phase-Angle Range	197
12.7 Eddy Currents	200
12.8 Skin Effect	200
12.9 Target Profile	202
12.10 Beat Frequency Oscillator	204
12.11 Reflected Resistance Thermometer	205
12.12 Reflected Impedance Gage	206
12.13 Reflected Impedance Flaw Detector	209
12.14 Reflectivity Modulation	210
12.15 Bridge Circuit	212
12.16 Antenna Patterns	213
 13. Reluctance Variations	 214
13.1 Ferromagnetic Cores	215
13.2 Variable Inductance	217
13.3 Variable Reluctance	218
13.4 Two-Coil Linkage	219
13.5 Transformer	219
13.6 Current Transformer	221
13.7 Directional Determination	222
13.8 Nonlinearity Compensation	223
13.9 Differential Transformer	225
13.10 Variable Reluctance Differential Transformer	227
13.11 Torsional Differential Transformer	227
13.12 Shaded Pole Effect	228
13.13 Linear Differential Transformer	229
13.14 Dynamic Variable Reluctance	231

13.15 Dynamic Reluctance Bridge	231
13.16 Choke	231
14. Composite Targets	234
14.1 Sensing-coil Response	234
14.2 Transmit-Receive Configuration	237
14.3 Induction Balance	240
14.4 Geophysical Targets	242
15. Motor Phenomena	244
15.1 String Galvanometer	244
15.2 Vibratron	245
15.3 Bifilar Galvanometer	247
15.4 D'Arsonval Galvanometer	247
15.5 Gaussian Galvanometer	248
15.6 Eddy Current Multiplier	249
Part III: Magnetons Moving Under Tight Constraints As in a Solid or Liquid	251
16. Magnetostriction	253
16.1 Magnetomechanical Hysteresis Loop	253
16.2 Villari Effect	255
16.3 Guillemen Effect	256
16.4 Villari Differential Transformer	256
16.5 Villari Torque Differential Transformer	257
16.6 Villari Bridge	258
16.7 Villari Steel-Rolling Shape Gage	259
16.8 Wertheim Effects	261
16.9 Wiedemann Effects	262
16.10 Nagaoka-Honda Effect	263
16.11 Magnetostrictive Acoustics	264
16.12 Magnetostrictive/Piezoelectric Effect	264
16.13 Magnetostrictive Detection Effect	264
16.14 Garshelis Effect	266
16.15 Magnetostrictive Resonator	267
16.16 Magnetostrictive Amplifier	268

16.17 Magnetostrictive Modulator	269
16.18 Sonic Delay Line	269
16.19 Domain Flip	269
17. Galvanomagnetic Effects	271
17.1 Classifications	272
17.2 Crystal Lattice	274
17.3 Solid Material	277
17.4 Carriers	278
17.5 Carrier Availability	279
17.6 Hot/Cold Carriers	280
17.7 Carrier Movements	281
17.8 Field Effect	282
17.9 Lorentz Forces	283
17.10 Forcing Fields	283
17.11 Dynamic Mechanisms of Resistance	285
17.12 Static Mechanisms of Resistance	287
17.13 Resistance	289
17.14 Mobility	290
17.15 Conductivity	291
17.16 Adiabatic Galvanomagnetoresistance	292
17.17 Magnetoresistive Device	293
17.18 Two-Material Magnetoresistance	294
17.19 Adiabatic Negative Hall Effect	295
17.20 Adiabatic Positive Hall Effect	298
17.21 Suhl Effect	298
17.22 Ettinghausen Effect	298
17.23 Heat Flow	299
17.24 Adiabatic Negative Nernst Effect	303
17.25 Adiabatic Positive Nernst Effect	304
17.26 Righi-Leduc Effect	305
17.27 Isothermal Hall Effects	307
17.28 Hall Current	307
17.29 Corbino Device	309
17.30 Liquid Corbino Device	310
17.31 Negative Hall Device	311
17.32 Hall Multiplying Device	313
17.33 Crystalline Anisotropy	314
17.34 Negative Nernst Device	315
17.35 Photoelectromagnetic Effect	315

17.36	Mechanoelectromagnetic Effect	317
17.37	Chemoelectromagnetic Effect	318
18.	Magneton Order Effects	319
18.1	Negative Magnetoresistance	320
18.2	Gauss Effect	322
18.3	Elastoresistance	323
18.4	Ferromagnetic Hall Effect	323
18.5	Electroferrimagnetic Effect	324
18.6	Heat Transport Effects	325
19.	Hysteretic Effects	326
19.1	Permeability	326
19.2	Operating Point	327
19.3	Permanent Magnetism	329
19.4	Air-gaps	332
19.5	Flux Guide	332
19.6	Square Hysteresis Loops	333
19.7	Memory Cores	334
19.8	Variable Mhu Magnetometer	337
19.9	Boucke Configuration	339
19.10	Peaking Strip	340
19.11	Magnetic Amplifier	341
19.12	Flux Gate Magnetometer	343
19.13	Magnetic Bubbles	346
19.14	Magnetometer	348
19.15	Boeck Effect	349
19.16	Wiegand Effect	350
19.17	Magnetic Recording	354
20.	Size Effects	355
20.1	Surface Effects	355
20.2	Fine-wire Longitudinal Magnetoresistance	356
20.3	Ferromagnetic Particle Size Effects	358
20.4	Supermagnetic Effect	359
20.5	Domain Rotation	359
20.6	Sondheimer Effect	360
20.7	Isothermal Electromagnetic Magnetoresistive Effect ...	360

21.	Strong Magnetic Field Effects	361
21.1	Az'bel-Kaner Resonance	362
21.2	Magnetoacoustic Resonance	363
21.3	Strong Field Magnetoresistance	363
21.4	Anisotropic Strong Field Magnetoresistance	364
21.5	Strong-Field Magnetosusceptance	364
Part IV: Magnetons Moving Under Loose Constraints As in a Vacuum or Gas		365
22.	Ionic Currents	367
22.1	Aurora	367
22.2	Singing Flames	368
22.3	Blowout Magnet	368
22.4	Magnetosphere	370
22.5	Magnetic Focusing	370
22.6	Beta Ray Spectrometer	371
22.7	Stern-Gerlach Experiment	372
22.8	Rabi Configuration	373
23.	Magnetron Effects in Gas	375
23.1	Magnetron Radius	375
23.2	Cyclotron Frequency	376
23.3	Cyclotron	376
23.4	Split-Anode Magnetometer	376
23.5	Magnetron	378
23.6	Magnetron Pressure Gage	379
23.7	Mass Spectrometer	380
23.8	Omegatron	382
23.9	Time-of-Flight Mass Spectrometer	382
23.10	Philips Ion Gage	384

Part V: Magnetons Moving in Environments with a Very Low Energy Content	385
24. Chemical Environment	387
24.1 Meissner Effect	388
24.2 Types of Superconduction	390
24.3 Spin Glass	391
24.4 Kondo Effect	391
24.5 Onnes Effect	392
24.6 Cryotron	393
24.7 Huebener-Govednik Switch	393
24.8 Factor Periodicity	394
25. Flux Quantization	395
25.1 Squid	395
26. Tunneling	397
26.1 Giaever Effect	397
26.2 Josephson DC Effect	399
26.3 Junction Manipulation	400
26.4 Josephson AC Effect	401
26.5 Josephson RF Effect	402
Glossary of Terms	403
Index	409
